As a resource center for physical activity information and materials, the USC PRC serves public health specialists and physical activity practitioners. Our primary resources are described below.

We maintain an extensive Web site (http://prevention.sph.sc.edu) to provide resources and information to researchers, public health practitioners, and others who are interested in promoting physical activity in their communities. The Web site contains research updates, which summarize recent physical activity research; copies of reports and tools developed by the USC PRC; an archive of past issues of the USC PRC newsletter; links to other physical activity-related Web sites; and descriptions of USC PRC projects.

The USC Prevention Research Center Notes is an e-mail newsletter with current information about physical activity and public health. The newsletter includes brief updates of current journal articles; notices of new reports, materials, and resources; listings of upcoming conferences and workshops; and topics related to promoting active community environments. Instructions for subscribing can be found on our Web site.

The Physical Activity and Public Health (PAPH) courses consist of an eight-day Postgraduate Course on Research Directions and Strategies and a six-day Practitioner’s Course on Community Interventions. The long-term goal of the courses is to improve the public’s health by increasing the number of researchers and practitioners who have expertise in the population-based promotion of physical activity. More information is available on our Web site at http://prevention.sph.sc.edu/seapines/index.htm.

The USC PRC has been funded by the Centers for Disease Control and Prevention since 1993. This publication was supported by Cooperative Agreement Number 1-U48-DP-000051 from the Centers for Disease Control and Prevention. Its contents are solely the responsibility of the authors and do not necessarily represent the official views of the Centers for Disease Control and Prevention.
The University of South Carolina Prevention Research Center (USC PRC) envisions Physically Active People in Active Community Environments. To achieve our vision, we are committed to conducting research and to translating that research into practice to improve the health of individuals, families, and communities.

**OUR MISSION AND VISION**

**OUR RESEARCH GOALS**

- **Identify factors that affect physical activity in community settings**
- **Evaluate the influences of community environments and policies on physical activity**
- **Develop successful physical activity interventions in community settings**
- **Design community interventions to reduce racial and ethnic disparities in physical activity**

**OUR CORE RESEARCH**

The USC PRC’s community-based participatory core research project is titled “Policy and Environmental Change to Promote Physical Activity: A Participatory, University-Community Partnership.” This project is conducted in Sumter County, S.C., through the Sumter County Active Lifestyles (SCAL) coalition. SCAL is a community-based coalition of city and county agencies, businesses, nonprofits, associations, and local residents. The USC PRC and SCAL work closely with the local public health district and the Sumter County Recreation and Parks Department to meet the SCAL goal to “increase physical activity or exercise among Sumter County residents by creating a supportive environment through policy and environmentally focused strategies.”
